## 11.1 Simplifying Radicals - Algebra

Section 1-3 : Radicals. We'll open this section with the definition of the radical. If  $n$  is a positive integer that is greater than 1 and  $a$  is a real number then,  $\sqrt[n]{a} = a^{\frac{1}{n}}$  where  $n$  is called the index,  $a$  is called the radicand, and the symbol  $\sqrt{\quad}$  is called the radical. The left side of this ...

WE SAY THAT A SQUARE ROOT RADICAL is simplified, or in its simplest form, when the radicand has no square factors. A radical is also in simplest form when the radicand is not a fraction. Example 1. 33, for example, has no square factors. Its factors are  $3 \cdot 11$ , neither of which is a square number.

## **Simplifying radicals - A complete course in algebra**

Radical expressions is a part of syllabus in algebra 1 (second math course), which finds application in many algebra questions including algebra word problems. A radical expressions is an expression which has square root, cube root etc. Simplifying radical expressions which include multiplying radical expressions involve use of laws of exponents. For example, sq. root  $(xy) = \text{sq. root}(x) * \text{sq. root}(y)$ . Learn more about how to simplify the radical expression by using the resources on this page.
