In radio and telecommunications a dipole antenna or doublet is the simplest and most widely used class of antenna. The dipole is any one of a class of antennas producing a radiation pattern approximating that of an elementary electric dipole with a radiating structure supporting a line current so energized that the current has only one node at

Benvenuti su OfficinaHF!

The all-band doublet antenna is nothing more than a $1/2$ wave dipole cut for your lowest operating frequency and fed with twinlead, ladder line, or open wire. It requires a tuner but is efficient and very frequency flexible. A single band dipole fed with coax (preferably with a 1:1 balun) is remarkably efficient and
