MECHANICAL OVERHAUL PROCEDURES FOR HYDROELECTRIC UNITS

An extensive study by a research team at the Technical University of Munich (TUM) has found modern hydroelectric power plants do not always protect fish better than conventional ones. In addition to the technologies employed, the specific location of the plant and the fish species being present at that location also play a role in fish protection, the research suggests.

(PDF) Review of Hydropower Plant Models

The study concluded that out of 530 sites studied, the department could generate up to 1 million megawatt-hours of electricity annually by adding hydropower capacity at 70 of its existing facilities located in 14 states. In October 2010, a similar study was completed to assess the potential capacity increases
