Conditional probability is defined to be the probability of an event given that another event has occurred. If we name these events A and B, then we can talk about the probability of A given B. We could also refer to the probability of A dependent upon B.

Statistics With  
Applications**

Probability and statistics, also called statistics and probability, are two related but separate academic disciplines. Statistical analysis often uses probability distributions, and the two topics are often studied together. However, probability theory

Since participation in games and gambling is as old as mankind, it seems as if the idea of probability should be almost as old. But, the realization that one could predict an outcome to a certain degree of accuracy was unconceivable until the sixteenth and seventeenth centuries.
